TieEdu · Admin Console

Admin Handbook

Running the TieEdu platform: content, payments, moderation, colleges, outbound messaging and the safety switches that keep it all off until you mean it.

For the TieEdu team: super admins, admins, finance, content editors, moderators, support and analysts

Contents

1. Getting in and staff roles
2. The console at a glance — every tab and what it is for
3. Daily and weekly routines
4. Payments, orders and coupons
5. Content: companies, packs, courses, study plans
6. Moderation: offer wall, guarantee claims, recruiters, candidate reports
7. Colleges and the TPO portal
8. Outbound messaging: push, broadcast, email, WhatsApp
9. The safety switches — everything that is off by default
10. AI features
11. A/B experiments
12. Server configuration reference
13. Rules you must not break

1. Getting in and staff roles

The console is at `/admin`; sign in at `/admin/login`. Only accounts with the admin role reach it, and inside, each person's **staff role** decides which tabs and actions they get.

Staff role	For	Can do
Super admin	Platform owner	Everything, including dangerous operations. Created automatically for the owner account.
Admin	Core team	Everything except dangerous operations.
Finance	Payments staff	Orders, payment verification, coupons, refunds.
Content editor	Content team	Companies, packs, courses, study plans, drops, posters.
Moderator	Community	Offer wall, reports and other student submissions.
Instructor	Course authors	Their courses and lessons.
Support	Help desk	Look up users and orders, help with access.
Analyst	Reporting	Read analytics, devices, orders, courses, users.
Viewer	Observers	Read-only.

Manage staff in **Users & Access**. A role can be given extra permissions on top; a grant never replaces the role's defaults.

2. The console at a glance

Group	Tab	What it is for
Commerce & Health	Overview	Today's health: sales, sign-ups, activity.
	Orders	Every order, its status and history.
	Payment Verify	Manual UPI payments waiting to be checked and unlocked.
	Guarantee Claims	Accuracy-guarantee claims to approve, reject or mark refunded.
	Users & Access	Accounts, disabling accounts, staff roles.
	Analytics	Traffic, funnels and engagement.
	Hero Posters	Banners on the home page.
Content & Vault	Company Hub	Companies: details, rounds, metrics, publishing.
	Content Builder	Company page content and studio.
	Pack Editor	Paid company packs and their modules.
	Study Plans	Plan templates and phases.
	Drops	Job/drive news posts, scheduled and archived automatically.
	Coupons & Pricing	Coupons, scopes and expiry; prices.
Learning	Courses	Courses, lessons, quizzes, exams.
	Certificates	Issued certificates; revoke if needed.
	XP Ledger	Every point ever granted (append-only; corrections are reversal rows).
	Skill Test	Question banks and skill tests.
	Mock Drives	Mock drive slots and results.
Engagement	Candidate Reports	Students' interview experience reports (outcome, difficulty) to publish or reject.
	Offer Wall	Placement stories to approve; “verified” after confirming by email.
	Recruiters	Recruiter applications to approve, reject or suspend.
	Experiments	A/B tests: start, stop, read results.
	Email Marketing	Leads, campaigns, templates, automations.

Group	Tab	What it is for
System	Notifications	Check push works on your own device before relying on it.
	Broadcast	Push a message to students. Two-step confirm; cannot be recalled.
	Settings	Platform details, UPI, and every on/off switch in chapter 9.

3. Daily and weekly routines

Every day

- **Payment Verify**: clear the UPI queue so students get access the same day.
- **Offer Wall**: approve or reject pending stories (pending first).
- **Recruiters**: review new applications.
- **Candidate Reports**: publish or reject new interview experiences.
- **Guarantee Claims**: if the guarantee is on.

Every week

- **Analytics**: sign-ups, activity, conversion.
- **Experiments**: read running tests.
- **Settings → Parent WhatsApp**: this week's sent / failed (Sundays).
- **Drops**: schedule the coming week's posts.

4. Payments, orders and coupons

- **Razorpay** payments unlock automatically through the payment webhook.
- **UPI (manual)** payments wait in **Payment Verify**. Check the amount and reference in your bank app, then approve to unlock — real money in, real unlocks out.
- **Coupons** can be limited to items and given an expiry. Expired or out-of-scope coupons are refused at checkout.

The accuracy guarantee

Off by default (Settings → Accuracy guarantee). When on, a student with a paid unlock can claim within 30 days of their interview if a round's pattern differed from what the page showed. Claims arrive in **Guarantee Claims**:

1. Read the claim and check it against other students' published interview experiences.
2. Approve or reject, with a note.
3. If approved, **refund through the payment provider yourself**, then mark the claim “refunded”. Nothing pays out automatically, and “refunded” is final.

5. Content: companies, packs, courses, study plans

- **Company Hub** creates the company; **Content Builder** designs its page section by section, with a preview before publishing. Publishing a company page writes an audit row.
- Page settings include **"Offer a Hinglish version"**; fill each section's Hinglish fields, or English shows.
- Every figure on a company page shows whether it is checked or being verified. Record sources for figures — pages without sources say so.
- **Pack Editor** holds the paid content; mark modules as free preview where you want a taster.
- **Courses** hold lessons, quizzes and the final exam; certificates are issued from completions and can be revoked in **Certificates**.

6. Moderation

Queue	Approve when	Notes
Offer Wall	The story is genuine and useful.	Mark "verified" only after confirming the offer with the student by email (their account email is shown only here). Never collect offer letters.
Recruiters	The website is a real company and the work email is on its domain.	Personal email addresses are refused at application. Suspending withdraws their open requests. A rejection note is shown to the recruiter.
Guarantee Claims	The pattern really differed.	See chapter 4.
Candidate Reports	The experience is genuine and consistent with others.	Published reports appear on company pages as candidate experiences, and back the "from candidate reports" labels.

Colleges moderate their own **notes from seniors** in the TPO portal; that is not an admin queue.

7. Colleges and the TPO portal

Each college's placement cell works in the Campus TPO Portal (`/tpo`). The TPO Handbook and the College Leadership Guide cover their side.

Onboarding a college

1. **Create the college** and **invite its first T&P Head**. These are done through the placement admin API (`/api/admin/placement/colleges`, `…/colleges/:id/invites`) — there is no console screen for them yet.
2. The Head accepts the invite link and then invites their own staff from the portal.

3. **Import the student roster** (and past drives) so students appear in batch readiness. For GLA the importer is `npm run import:gla` in the backend; it needs `PLACEMENT_IMPORT=1` in production and runs in one transaction.

> **CAREFUL**
> Roster files contain real personal data. Keep them in `backend/seed-data/` and never commit or email them.

8. Outbound messaging

Channel	Who sends	Controls
Push notifications	Platform events, broadcasts, nudges, reminders	Test your own device first in **Notifications**.
Broadcast	Admins	Tick a box and retype the title. Delivered pushes cannot be recalled.
College nudges	TPO staff (Head approves)	Max 2 per student per week; students can opt out.
Email marketing	Admins, in **Email Marketing**	Leads, campaigns, templates; unsubscribes are honoured at send time.
Parent WhatsApp / email	Weekly, automatic	Off until switched on; double opt-in; see chapter 9.

9. The safety switches

Every feature that spends money, contacts people outside the platform, or shows students to outsiders ships **off**. Turn each on deliberately.

Feature	Switch	Also needs
AI grading — mock interview	Settings → AI feedback → Mock interview	`ANTHROPIC_API_KEY`; set the daily limit per student
AI coaching — English coach	Settings → AI feedback → English coach	Same key; its own daily limit
Accuracy guarantee	Settings → Accuracy guarantee	A refund amount; manual refunds
Parent WhatsApp	Settings → Parent WhatsApp updates	Meta WhatsApp Business account, approved template (text shown in Settings), `WHATSAPP_*` variables
Parent email	Settings → "Also offer a weekly email"	Resend. **The key is already set**, so this tick is the only safeguard.
Recruiter search	Settings → Recruiter search	Approve recruiters in the Recruiters tab
Study-time reminders	Server variable `STUDY_REMINDER_PUSH=1`	Push configured
Weekly recap push	Server variable `WEEKLY_RECAP_PUSH=1`	Push configured
A/B experiment	Experiments → Start	—

> **DEVELOPMENT SERVERS**
> A development server shares real students' push subscriptions. Never set the push variables on a development machine.

10. AI features

- Students always get free, offline feedback: the mock interview checks answers against key points; the English coach checks pace, filler words and common slips.
- With AI on, Claude adds a score and a better answer (mock interview) or tips and a polished version (English coach), up to the daily limit per student. Over the limit, on an error or a refusal, the free feedback is used and the student is told why.
- Only the answer text is sent to Anthropic — never names, emails or audio.
- Each AI-graded answer is billed to your Anthropic account. Set the daily limits with that in mind.

11. A/B experiments

The **Experiments** tab lists experiments defined in code. The first: the company page's main button wording (A = as authored, B = “See where you stand in 2 minutes”). Success = the student starts the free readiness check.

- Press **Start**; each visitor then sees one version, always the same one.
- The table shows unique visitors, successes and the rate per version, and a verdict. No winner is named under 200 visitors per version, or when the difference could be chance ($p \geq 0.05$).
- Press **Stop** to end it; counts are kept. To adopt B for good, change the button text in Content Builder.

12. Server configuration reference

Variable	Purpose
`DATABASE_URL`	Placement database (colleges, TPO access, rosters). Without it, college features show “temporarily unavailable”.
`JWT_SECRET`	Sign-in tokens.
`RAZORPAY_*`	Payments and the payment webhook.
`RESEND_API_KEY`, `EMAIL_FROM`, `EMAIL_REPLY_TO`	Outbound email.
`VAPID_*`	Push notifications.
`NEXT_PUBLIC_SITE_URL`	Links inside emails and WhatsApp messages. Parent messages refuse to send without it.
`ANTHROPIC_API_KEY`	AI feedback (plus the Settings switches).
`WHATSAPP_TOKEN`, `WHATSAPP_PHONE_NUMBER_ID`, `WHATSAPP_TEMPLATE`	Parent WhatsApp (plus the Settings switch).
`WEEKLY_RECAP_PUSH`, `STUDY_REMINDER_PUSH`	Set to `1` only on the production server.

13. Rules you must not break

- **Never show a number you cannot back.** Unknown figures stay blank or say “being verified”.
- **Never loosen a privacy floor** (5 or 10 students) or a consent rule without the owner's decision.
- **Never edit the XP ledger** by hand; corrections are reversal rows.
- **Back up** `backend/data/db.json` before any data repair.
- **Never rewrite git history** or force-push without the owner's explicit yes.
- Refunds are always made by a person, through the payment provider.
